Manual QA Tester
2026

PROJECT OVERVIEW

PROJECT SUMMARY

Executed assigned manual test scenarios for a travel and hospitality platform. The work focused on web and mobile experiences, validating user flows and Turkish interface content against expected results.

ROLE	Manual QA and Localization Tester
APPROACH	Scenario-based manual regression and functional checks

PLATFORMS & ENVIRONMENTS

DESKTOP WEB
Windows
Chrome

MOBILE WEB
iOS
Safari

NATIVE APP
Android

TEST SCOPE

- Hotel search, accommodation filters, map cards, and hotel detail pages. Activity search,
- language filtering, result updates, and experience detail pages.
- Restaurant search, filtering, restaurant detail pages, and page content. Android trip
- creation and trip settings flows.

QUALITY CHECKS
Turkish translation and text rendering, spelling and punctuation, number/date/currency formatting, expected navigation, and filter behavior.

WORK & RESULTS

WHAT I DID

Followed assigned test steps and compared actual behavior with the expected results.

- Checked search, filters, navigation, page details, and localized interface elements across assigned environments.
- Recorded test outcomes in the test sheet using the project status values.
- Reported reproducible issues with clear reproduction steps and screenshot/video evidence.
- Applied the project scope and reporting rules when deciding whether a finding should be submitted.

TOOLS & TECHNOLOGIES

Google Sheets for test cases and execution tracking; project bug tracker for issue reports; Windows and Chrome for desktop web; iOS and Safari for mobile web; Android native app for mobile scenarios.

FINDINGS & OUTCOME

REPORTED ISSUE

Identified a Turkish availability-button label truncated on hotel map cards. The issue was documented and the report was accepted in the tracker.

BLOCKED SCENARIOS

Some experience flows could not be completed because the specified page was unavailable. These were recorded as blocked rather than treated as completed tests.

EXPERIENCE DEMONSTRATED

Structured manual testing, cross-environment regression checks, localization review, and evidence-based bug reporting.
